

P2P FOOD APP ? STEP-BY-STEP WORKFLOW TESTING DOCUMENT

1) SCOPE AND OBJECTIVE

This testing guide converts the app workflow into executable QA steps for Buyer, Seller, Organization, Rider, and Shared modules.

OBJECTIVE

- Validate role-based navigation and startup routing.
- Validate end-to-end order lifecycle (browse ? cart ? checkout ? order tracking).
- Validate onboarding and authentication paths for Organization and Rider.
- Validate seller-side catalog/order operations and chat handoffs.
- Validate shared modules (notifications, settings, deep links, back button behavior).

2) TEST ENVIRONMENT & PRECONDITIONS

- Build: Latest QA build of the app.
- Devices: Android (required for hardware back-button checks), iOS optional.
- Test data:
 - At least one buyer account
 - At least one seller/organization account with active kitchen and dishes
 - At least one rider account
- Network: Stable internet connection.
- App state: Ability to clear AsyncStorage between selected scenarios.

3) EXECUTION RULES

- For each case, execute steps in order and capture screenshots/logs for failures.
- Use this expectation format:
 - Expected: what must happen
 - Fail if: failure condition
- Record route transitions when validating navigation.
- When validating edge cases, verify both UI message and API behavior (if logs are available).

4) ROLE INITIALIZATION & NAVIGATION BOOTSTRAP

TC-INIT-01: UNAUTHENTICATED LAUNCH

1. Clear app storage.
 2. Launch app.
- Expected: WelcomeScreen appears.
 - Fail if: app opens directly on any role dashboard.

TC-INIT-02: CUSTOMER PERSISTENCE

1. On WelcomeScreen, select role Customer.
 2. Tap Get Started and complete terms consent.
 3. Close and relaunch app.
- Expected: app opens on HomeScreen.
 - Fail if: role is lost or user is redirected to incorrect flow.

TC-INIT-03: VENDOR STARTUP ROUTING

1. Select Vendor on WelcomeScreen.
 2. Continue through AgreeAndContinue.
- Expected: user is routed to vendor onboarding/sign-in flow (organization path).
 - Fail if: app opens buyer/rider flow.

TC-INIT-04: RIDER STARTUP ROUTING

1. Select Rider on WelcomeScreen.
 2. Continue through AgreeAndContinue.
- Expected: user is routed to RiderSignin.
 - Fail if: wrong role flow opens.

TC-INIT-05: DEEP-LINK ROUTING

1. Open app using supported deep links for:
 - SelectedFoodScreen
 - KitchenScreen
 - AddFoodScreen
 2. Observe resulting route.
- Expected: app opens target route after nav initialization.
 - Fail if: app ignores link or crashes.

5) BUYER WORKFLOW TESTING

TC-BUY-01: KITCHEN DISCOVERY

1. Login as buyer and open HomeScreen.
 2. Enter search term in search bar.
 3. Open SearchScreen and select suggestion/recent item.
- Expected: selected kitchen opens in KitchenScreen.
 - Fail if: mismatch between selected item and opened kitchen.

TC-BUY-02: DISH SELECTION AND REQUIRED OPTIONS

1. From KitchenScreen, open a dish on SelectedFoodScreen.
 2. Attempt add-to-cart without selecting required options.
 3. Select required options and quantity ≥ 1 .
 4. Tap Add to Cart.
- Expected: validation blocks incomplete selection; valid payload adds item.
 - Fail if: incomplete option set is accepted.

TC-BUY-03: CART CONSTRAINTS

1. Open CartScreen.
 2. Increase quantity repeatedly beyond stock.
- Expected: app blocks increase and shows stock constraint error.
 - Fail if: quantity exceeds available stock.

TC-BUY-04: MULTI-CART BEHAVIOR

1. Add items from Kitchen A.
 2. Add items from Kitchen B.
 3. Open all-cart listing.
- Expected: AllCartScreen shows separate carts and allows switching.
 - Fail if: carts merge incorrectly.

TC-BUY-05: CHECKOUT WITH COUPON

1. From CartScreen, tap Checkout to open ConfirmOrderScreen.
 2. Apply valid coupon from BuyerCouponScreen.
 3. Confirm totals update.
 4. Apply invalid/expired coupon.
- Expected: valid coupon updates total; invalid coupon shows explicit error.
 - Fail if: totals don't change correctly or invalid coupon is accepted.

TC-BUY-06: DELIVERY ADDRESS ENFORCEMENT

1. In ConfirmOrderScreen, enable delivery toggle.
 2. Try placing order without selecting address.
 3. Select address and place order.
- Expected: address is mandatory for delivery; successful flow lands on OrderDetailsScreen.
 - Fail if: delivery order is placed without address.

TC-BUY-07: GUEST CART PENDING FLOW

1. Log out / use guest state.
 2. Attempt add-to-cart on SelectedFoodScreen.
- Expected: pending cart/login prompt flow appears and data is preserved for continuation.
 - Fail if: item silently disappears or no prompt is shown.

TC-BUY-08: REVIEW PROMPT TRIGGER

1. Prepare a recently delivered order.
 2. Open HomeScreen.
- Expected: rating prompt appears via order-review logic.
 - Fail if: no prompt for eligible delivered order.

6) SELLER WORKFLOW TESTING

TC-SEL-01: SELLER DASHBOARD ACCESS

1. Login as seller.
 2. Open SellerHomeScreen.
- Expected: dashboard renders tabs/metrics without crash.
 - Fail if: role lands on incorrect dashboard.

TC-SEL-02: RECIPE CREATE AND EDIT

1. Go to SellerRecipeScreen.
2. Tap add dish and fill required fields.
3. Save.

4. Reopen same dish and edit details.

- Expected: dish appears in list and updates persist.
- Fail if: missing-field validation is bypassed or save fails silently.

TC-SEL-03: COUPON MANAGEMENT

1. Open coupon module.

2. Create coupon with valid fields.

3. Create coupon with invalid format/dates.

- Expected: valid coupon saved; invalid input blocked with clear message.
- Fail if: invalid coupon is accepted.

TC-SEL-04: DISCOUNT LIFECYCLE

1. Create discount campaign.

2. Verify active/inactive behavior by date range.

- Expected: discount status reflects configured dates.
- Fail if: incorrect activation window.

TC-SEL-05: ORDER OPERATIONS

1. Open SellerOrderScreen and select order.

2. View in OrderViewScreen.

3. Attempt valid status update.

- Expected: order details load and update succeeds with refreshed status.
- Fail if: status remains stale or wrong transition allowed.

7) ORGANIZATION WORKFLOW TESTING

TC-ORG-01: REGISTRATION VALIDATION

1. Open OrganizationSignup.

2. Submit empty form.

3. Submit duplicate phone (if available).

- Expected: required and availability validations block progression.
- Fail if: invalid form proceeds.

TC-ORG-02: OTP VERIFICATION CONTROL

1. Complete signup initiation.

2. Enter wrong OTP.

3. Wait for resend timer and request resend.

4. Enter correct OTP.

- Expected: wrong OTP blocked; resend gated by timer; correct OTP proceeds.
- Fail if: timer enforcement fails.

TC-ORG-03: KITCHEN PROFILE ONBOARDING

1. Complete OrganizationKitchenSignup including logo upload.

2. Validate kitchen type behavior.

- Expected: required fields enforced with proper formatting (phone, CNIC, email).
- Fail if: malformed data accepted.

TC-ORG-04: CNIC IMAGE ENFORCEMENT

1. On OrganizationVendorCNIC, upload only one side.
 2. Try continue.
 3. Upload both sides and continue.
- Expected: both images required before proceeding.
 - Fail if: single-image progression allowed.

TC-ORG-05: BUSINESS DOC CONDITIONAL REQUIREMENT

1. Select Restaurant and skip business doc.
 2. Select HOMECHEF and skip business doc.
- Expected: document required for restaurant; optional for home chef.
 - Fail if: requirement does not vary by type.

TC-ORG-06: VERIFICATION COMPLETION

1. Complete onboarding and land on VerificationScreen.
 2. Tap continue.
- Expected: user reaches OrganizationHomeScreen.
 - Fail if: dead-end or incorrect route.

8) RIDER WORKFLOW TESTING

TC-RID-01: RIDER SIGN-IN VALIDATION

1. Open RiderSignin.
 2. Submit empty/invalid fields.
 3. Submit valid credentials.
- Expected: invalid input blocked; valid login opens RiderHomeScreen.
 - Fail if: malformed credentials pass client validation.

TC-RID-02: FORGOT PASSWORD FLOW

1. Trigger RiderForgotPassword.
 2. Submit phone and receive OTP.
 3. Verify OTP in RiderOtpVerify.
 4. Reset password in RiderResetPassword.
- Expected: successful reset returns user to RiderSignin.
 - Fail if: reset accepts mismatched passwords.

TC-RID-03: ORDER FILTERING AND UPDATE

1. In RiderHomeScreen, switch status pills.
 2. Open an assigned order and update lifecycle status.
- Expected: list filters correctly; status update persists.
 - Fail if: filters do not change data set.

TC-RID-04: RIDER CHAT HANDOFF

1. Open chat from rider order context.
2. Send message.

- Expected: message appears in conversation history.
- Fail if: message send appears successful but history does not update.

9) SHARED MODULE TESTING

TC-SHARED-01: APP SETTINGS LINKS

1. Open AppSetting.
 2. Tap policy/delete-account links.
- Expected: DeleteAccountWebViewScreen opens with provided URL.
 - Fail if: screen opens blank without URL handling.

TC-SHARED-02: NOTIFICATIONS

1. Open notifications screen.
 2. Select notification item (if applicable).
- Expected: list loads and item navigation follows notification type.
 - Fail if: screen fails to render list.

TC-SHARED-03: ANDROID ROOT BACK BEHAVIOR

1. Open each role home root screen.
 2. Press hardware back.
- Expected: app exits when no previous route exists.
 - Fail if: app loops or pops to invalid state.

10) REGRESSION MATRIX (MINIMUM SMOKE SET)

Run these before release candidate sign-off:

1. TC-INIT-01 Unauthenticated launch
2. TC-INIT-05 Deep-link routing
3. TC-BUY-02 Dish required options
4. TC-BUY-05 Coupon totals
5. TC-BUY-06 Delivery address enforcement
6. TC-SEL-02 Recipe create/edit
7. TC-ORG-02 OTP flow
8. TC-RID-03 Rider status update
9. TC-SHARED-03 Android back-button exit

11) DEFECT LOGGING TEMPLATE

- Test Case ID:
- Build/Version:
- Role:
- Device/OS:
- Precondition:
- Steps to Reproduce:
- Actual Result:
- Expected Result:

- Severity/Priority:
- Evidence: screenshot/video/log reference

12) SIGN-OFF CRITERIA

- No blocker/critical defects in checkout, login, order state transitions, or onboarding.
- All smoke tests pass.
- Known medium/low defects documented with workaround/impact.
